

## Training that Impacts Your Bottom Line!

**Principles of Lean:** Traditional manufacturing philosophies stress high utilization of machinery and manpower with little concern for cycle time or manufacturing waste. Lean manufacturing focuses on creating greater production efficiencies by implementing value-added activities to minimize waste. By utilizing a simulated learning environment, workshop participants experience a complete Lean transformation and learn how to implement Lean principles within their own company. By introducing and implementing Lean principles, your company can improve efficiencies, reduce waste, increase profitability and provide customers with high quality products at competitive prices.

**Who should attend?** Business and manufacturing leaders that are interested in reducing their inventory, improving their overall quality, improving their on-time delivery performance, and improving their productivity.

### **Principles of Lean Workshop**

**January 12, 2010 - Tuesday  
AUBURN, MAINE**
